

Why FibarSystem 300 Stays Good When the Weather Turns Bad

It's no secret that the weather across the U.S. has become unpredictable, which is a critical factor when you're planning a playground.

Just one inch of rainfall per hour drenches a typical 2,500 square-foot playground surface with 1,500 gallons of water. Which means one bad rainstorm can seriously damage a sub-standard playground surface with no drainage system. That could mean expensive repairs.

All of which brings up a crucial fact: Except for a few desert-like areas, the entire U.S. is subject to rainstorms of at least one inch per hour several times a year. And that's why bulk wood fiber with no drainage system is no bargain. It's a failed installation waiting to happen.

The plain fact is, every playground must have a drainage system, and the standard, cost-effective choice is FibarSystem 300:

- It comes with FibarFelt® geotextile fabric to separate the wood fiber from the soil below and keep out dirt, stones, and weeds (see other side).
- It comes with FibarDrain® strips, which collect water from the FibarFelt and channel it safely away, so the wood fiber dries quickly-and kids get more hours on the playground.
- It comes with a Buyer Protection Plan, which includes a 25-year Warranty.

In fact, FibarSystem 300 surface comes with everything you need for a trouble-free, longlasting installation-for only 20% more than the cost of buying and installing plain bulk wood fiber. One bad rainstorm-just one-and you'll see that it's money well spent. It all adds up to better protection for children and more peace of mind for playground designers, specifiers, and owner/operators - at an affordable cost. No wonder we're the world's leading playground surface provider, with 75,000 installations worldwide. To talk with a playground surface expert, contact us today.

WITHOUT FIBARSYSTEM 300

How FibarSystem 300 Protects Your Investment From Bad-Weather Damage

Fibar Engineered Wood Fiber® Surface

Not wood chips, but a selection of soft and springy natural wood fibers, up to 12 inches deep, and engineered to knit together. The surface absorbs shock when kids fall.* Provides trouble-free wheelchair access (complies with the Americans with Disabilities Act). And keeps its natural beauty for many years.

FibarDrain® Strips

This component works like perforated pipes to collect rainwater and channel it safely away, preserving the integrity of your surface, even in bad weather. More than pays for itself the first time you need it (see other side).

FibarFelt® Geotextile Fabric

works like a giant filter to let water flow through, while it keeps dirt, stones, and weeds from invading the Fibar Engineered Wood Fiber.

25-Year Warranty and Liability Insurance

We are so confident of FibarSystem 300, we provide a 25-year warranty and liability insurance - a package of protection not offered by any other playground surface company.

When you invest in a playground surface, you want it to provide many years of trouble free performance-even in bad weather-which is exactly what the patented FibarSystem 300 is designed to do. It's why we've become the world leader in playground surfacing, with over 75,000 installations worldwide. To talk with a playground surface expert, contact us today!
