

TotTurf®

BONDED RUBBER SURFACING

Bonded rubber is poured on-site like other poured-in-place systems, but this mixture is only one layer. The sole layer consists of recycled, shredded rubber pieces and a urethane binder. It provides a seamless surface and provides accessibility to all play events. Our custom-bonded rubber playground surfacing is available in 3 color blends and 7 solid colors.

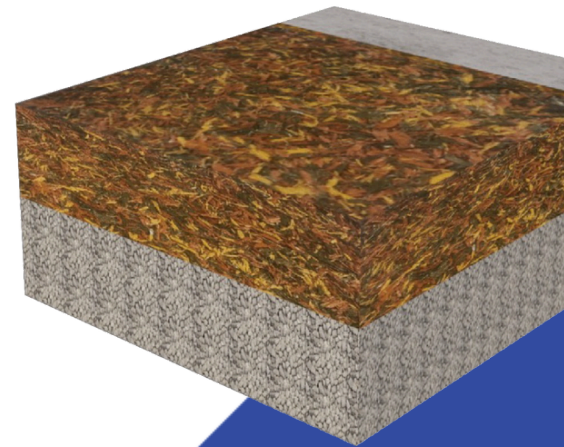

Features

- Rubber is 100% recycled
- Larger particles provide the natural look of loose fill surfacing without the disadvantages of displacement
- The single layer installation may offer a quicker install
- UV and moisture resistant

Basic Specifications

- Comprised of a precise combination of 100% wire-free, clean recycled rubber, a polyurethane binder, and a pigmented colorant
- The binder is a 100% single component MDI-based polyurethane binding agent.
- Expertly installed and troweled by hand to provide a resilient, seamless appearance
- Available in black, brown, cypress (brownishyellow), red, green, yellow or blue. Custom mixes also available.
